

Limb Saw

LIMB SAW

A CUT

ABOVE AND BEYOND

Job Done Right.

Overhanging limbs can take over trails and fence lines. Now you can recover lost ground by limbing and trimming from the seat of your tractor or skidsteer.

The HLA Limb Saw is a hydraulically powered chain saw, mounted on a 12' boom pole. Combined with your loader height, you now have the ability to reach over 20'. The Limb Saw's boom also allows you to reach over ditches and other obstacles and get to those hard to reach branches.

Gain access to valuable land and potentially increase yield from your fields. Tame unruly fence rows, allowing large equipment to get into all areas of your fields and prevent equipment damage from overhanging branches.

Eliminating ladders and climbing, you and your HLA Limb Saw will make short work of tall jobs.

Specifications	HLS1224
Hydraulic Flow	15 GPM @ 3000 PSI
RPM	2550 @ 15 GPM
Power	22 HP
Torque	45 ft-lb
Reach	12' with spring tension cut assist
Saw	Standard Stihl 24" Guide Bar and Cutting Chain
Chain Oiler	Automatic Chain Oiler
Weight	395 lbs (approx.)

Cutting

Using standard bars and chains makes it easy to find replacements, allowing you to trim those hard to reach places.

Driven

At 2550 rpm the hydraulically driven saw powers through branches, cleaning up woodlots, orchards, and trails.

Reach

The 12' boom gives you the ability to reach over 20', allowing you to safely reach up or over ditches and obstacles.
