

Farm King

SNOWBLOWER

Model 1200

The Farm King 1200 Snowblower is a large capacity snowblower designed for faster and more accurate snow removal. The 120" cutting edge and dual 15" augers create a high capacity blower with excellent snow throwing ability. Built for more than 40 years the Farm King line of snowblowers are the most dependable in the industry.

Hydraulic Spout Rotation

The Farm King 1200 snowblower utilizes a powerful hydraulic motor to control the spout rotation. Using a motor instead of a cylinder to control rotation increases the blower's responsiveness and gives the operator a greater range of control over the placement of the snow.

Hydraulic Hood Deflector

The hydraulically controlled hood deflector on the 1200 provides for quick and simple adjustments on the fly.

Intake

Dual 15" augers work with a 4-blade fan to pull snow through quickly and evenly. The larger double auger and increased fan depth helps the 1200 snowblower work well in wet and heavy snow.
