

Now you can wrap, transport, and feed out round bales with a single tool

The Round-About® universal hay tool allows a single operator to wrap most bales quickly and easily.

Why wrap?

Wrapping round bales in stretch plastic conserves moisture and nutrients while virtually eliminating waste due to spoilage. As a result, you get more from every bale. More usable hay, more food value per pound, more payback on your investment.

Why the Round-About hay tool?

Simple. Unverferth's patented Round-About hay tool provides more convenience and versatility than any other round bale handling implement you can buy.

With its exclusive, patented design, the Round-About tool not only lifts, spins, wraps, and transports bales, it also unrolls those bales when it's time for feeding. That's year-round performance.

The Round-About unit attaches easily to any three-point hitch and can be used with any bale, regardless of weight or size. A rugged steel frame and heavy-duty components insure years of trouble-free service.

With no mast to damage your cab or break windows, the Round-About is safer to operate. In addition, a plastic roll which can be advanced manually or automatically, a telescoping roller arm, adjustable plastic tension, and four adjustable gripper prongs make the Round-About hay tool remarkably convenient.

Unverferth supplies 20" wide high-quality, UVI-treated, black or white plastic stretch wrap for use with the Round-About tool.

Take a look at the features on the back of this sheet. Aren't the competitive tools you've seen asking you to settle for a whole lot less?

Round-About® Features

All operations are performed from one convenient position.
(on/off control, plastic advancement,
tension adjustment, and bale rotation speed adjustment.)

Chains allow plastic roll to swing around bale ends for total wrap haylage applications.

Telescoping roller arm may be adjusted to accommodate bales of any size.

Heavy-duty steel construction and durable components.

Adjustable tension for plastic wrap.

Roller keeps stretch wrap square to bale. Positioned to provide easy access for changing, cutting, and tying plastic wrap.

High tensile strength, 2-1/4" diameter, "stress-proof" steel bale spike rotates for easier entry into "hard-center" bales.

Heavy gauge 40" backer wheel holds bale in position to prevent damage to the unit.

Mounts easily on any category II or III three-point hitch.

Adjustable 16" gripper prongs (4) may be positioned out for wrapping or in for unrolling.

Heavy-duty 18.7 cubic inch displacement motor for long-term dependability. Exceeds requirement for tractors with newer 3000 psi open or closed hydraulic systems, and requires only one hydraulic outlet.
